C Program to Find the Largest Number

This beginner-friendly program reads three integers and prints the largest one.

C Code

```
#include <stdio.h>

int main(void)
{
    int a, b, c;

    printf("Enter three numbers: ");
    scanf("%d %d %d", &a, &b, &c);

    if (a >= b && a >= c)
    {
        printf("Largest number = %d\n", a);
    }
    else if (b >= a && b >= c)
    {
        printf("Largest number = %d\n", b);
    }
    else
    {
        printf("Largest number = %d\n", c);
    }

    return 0;
}
```

Sample Output

```
Enter three numbers: 12 45 30
Largest number = 45
```

How it works

1. The program reads three integers: a, b, and c.

2. The first if condition checks whether a is greater than or equal to both b and c.

3. If not, the else-if condition checks whether b is greater than or equal to both a and c.

4. Otherwise, c is the largest. Using >= also handles cases where two or more values are equal.

To compile with GCC: gcc largest.c -o largest

Run on Windows PowerShell: .\largest.exe
